Education

Georgia Institute of Technology Jan 2027 – 2029 (Expected)
M.S. Computer Science

University of Central Florida Aug 2021 – May 2024
B.S. Computer Science, GPA: 3.5

Skills Summary

Technologies: Python, SQL, Java, JavaScript, TypeScript, C, C++, Node.js, Express.js, Flask, React.js

Infrastructure: Oracle, PostgreSQL, MongoDB, Azure DevOps, dbt, Snowflake, AWS, Docker, Git, REST APIs, Linux

Work Experience

Solution Analyst — Deloitte Consulting LLP Oct 2025 – Present

- Designed and implemented a **9-table Oracle database** to track **97 data-exchange interfaces** across 40+ federal, state, and third-party partners, replacing a 255-row Excel spreadsheet
- Made multi-filter interface lookups **50x faster** by replacing manual spreadsheet filtering with sub-second SQL queries, letting the team self-serve the full tracker on demand
- Maintained and executed batch jobs across **17 production environments**, monitoring overnight execution, triaging failures, and restarting stalled jobs to **reduce resolution latency**
- Documented the database design and core queries in a reference guide for non-technical managers

Senior Design Capstone — Sponsored by Siemens Energy, UCF Aug 2023 – May 2024

- Gathered requirements from stakeholders and identified an emerging issue in turbine component identification, creating a custom solution that improved the accuracy of component tracking and maintenance processes
- Designed and developed an iOS mobile application using Swift, integrating Apple Vision Kit to scan turbine serial numbers, interfacing with a central database via a Flask API for real-time retrieval, and automating CSV exports
- Trained YOLOv8 model on a custom-labeled dataset for automated character recognition of turbine serial numbers, achieving 99.5% accuracy and eliminating manual data entry

Projects

FiestaGo — Event Services Marketplace — Live Site Jul 2025 – Present

- Built a full-stack marketplace (Next.js, TypeScript, PostgreSQL) with Stripe Connect for vendor onboarding and payouts, Checkout, webhook-driven booking creation, refunds, and double-booking protection
- Built a listing wizard, pricing engine (22 tests), vendor and admin dashboards, with automated database migrations

Event Management App and Website — GitHub Aug 2023 – Dec 2023

- Led a team of 5 developers to build a social events app, integrating a Flutter frontend with a MERN backend and implementing JWT authentication, password hashing, and API optimization
- Designed and managed MongoDB schemas supporting detailed user profiles and event data

Inquietum — Algorithmic Trading System — GitHub Jul 2026

- Built a modular Python trading system separating strategy, risk management, and exchange connectors, running an SMA crossover strategy with position sizing and stop-loss, backtested with vectorbt on crypto market data

ShellHacks Hackathon — Florida International University Sep 2023

- Built a web app for the Google Challenge providing international students scholarship and support resources
